Education

CAU(Chrisitian-Albrechts-University)   *Kiel, Germany*
B.S. IN COMPUTER SCIENCE AND ECONOMICS   *Aug. 2016 - Sep. 2020*

Skills

DevOps	Docker, Jenkins, TravisCI, GitHub Actions, Git, JIRA
Backend	Flask, Django, Wordpress, NodeJS, Spring
Databases	Postgres, MySQL, Redis, Elastic
Frontend	HTML, CSS, Hugo
System Administration	Windows, MacOS, Linux, Bash, Powershell
Programming languages	Python, Javascript, Java, C, SQL, Autohotkey, LaTeX
Languages	German, English

Work Experience

Raytheon Anschütz GmbH   *Kiel, Germany*
WORKING STUDENT: TEST AUTOMATION   *Jun. 2019 - Sep. 2020*

- Further development and maintenance of an existing test framework based on Autohotkey for the automatic execution of system tests.
- Development of an internal web application for the decentralized administration of test systems. This included a web application together with Raspberry PI based consoles.
- A Python-based application for the automated dashboard creation for JIRA.
- Kleinere Skripte auf Basis von Python oder Autohotkey.

Smartphoniker GmbH.   *Kiel, Germany*
FULL STACK DEVELOPER   *since Jun.2017*

- I have built, managed and deployed a strongly micro service-oriented company infrastructure.
- Built fully automated CI/CD pipelines based on GitHub Actions, TravisCI, Scalingo and Docker.
- Implemented a whole merchandise management system used by over 20 employees. Mainly based on Flask, Postgres, Redis, Celery.
- I Built and deployed an online shop. Based on Flask and Postgres.
- Maintained an existing Wordpress website.
- Built a custom Kiosk to display ads and information as part of a digital signage campaign. This includes the creation of custom images for Raspberry PI's
- I integrated existing services (Vigil, Raidr) into our infrastructure and published actively maintained libraries for them on PyPi.
- I took care of the hosting and administration of our servers
- responsible for the constant availability, reliability, correctness and security of our systems which have led to over 100,000 successful repairs
- Many more things like bots for Slack, monitoring systems or status pages

Extracurricular Activity

Maintenance of several open source packages avaible on PyPi
MAINTAINER

- pyais
- py-vigil-reporter
- py-raider-reporter

Stanford's CS116 - From Nand to Tetris I
STUDENT   *since Oct. 2019*

- Building a Modern Computer From First Principles
- Boolean logic and arithmetic. Sequential logic.
- Machine language.
- Computer architecture.
- Assembler and program control.
- High-Level language and Compilers.

Harvard - CS50

Sep. 2019 - Oct. 2019

- Introduction to Computer Science.
- Solved different tasks using C, Python and Javascript.
- Deepend my knowlegde about basic algorithms and math.
